

International Journal of
CONTROL

The Theory of Process Control and Automation

UNIVERSITY OF HAWAII
LIBRARY

LIBRARY USE ONLY

Editor: J. THOMSON

Editorial Board:

France - - -	Professor P. AIGRAIN
Holland - - -	Professor H. B. G. CASIMIR
U.K. - - -	A. T. FULLER
Germany - - -	W. KLEIN
U.S.A. - - -	J. C. LOZIER
U.K. - - -	Professor J. C. WEST

Volume X. First Series

July 1969 to December 1969

CONTENTS OF VOL. X. (Nos. 1-6) (FIRST SERIES)

NUMBER 1—JULY

	Page
The response analysis of linear systems with stationary random inputs, via the system autocorrelation function. By E. HUNTLEY, Department of Applied Mathematics and Computing Science, University of Sheffield.....	1
The serial/matrix technique applied to the analysis of linear systems with stationary random inputs. By E. HUNTLEY, Department of Applied Mathematics and Computing Science, University of Sheffield.....	13
Optimal control of a continuous stirred tank reactor with transportation lag. By JOHN H. SEINFELD, Chemical Engineering Laboratory, California Institute of Technology	29
Optimal linear filtering for linear systems with state-dependent noise. By P. J. McLANE, Department of Electrical Engineering, University of Toronto, Toronto, Ontario, Canada.....	41
On the design of approximately optimal feedback controllers for a distributed parameter system. By A. J. KOIVO and P. KRUH, Department of Electrical Engineering, Purdue University, Lafayette, Indiana.....	53
Applications of phase equivalent reduction in multiple parameter identification using sinusoidal test signals. By D. V. R. RAO and V. SESHADRI, Indian Institute of Technology, Madras-36.....	65
A computational approach to optimal control of stochastic saturating systems. By W. M. WONHAM and W. F. CASHMAN, NASA/Electronics Research Center, 575 Technology Square, Cambridge, Mass.	77
Novel interpretation of synchro principles. By F. L. N-NAGY and B. D. McNULTY, Electrical Engineering Department, University of Salford, Salford 5	99
 Correspondence:	
Reply to comments on "The frequency response and jump-resonance criteria of non-linear control systems". By I. S. N. MURTY and B. L. DEEKSHATULU, Department of Electrical Engineering, Indian Institute of Science, Bangalore 12, India.....	111
Comments on "Transient stability of an a.c. generator by Lyapunov's direct method". By JACQUES L. WILLEMS, University of Gent, Belgium	113
Comments on the use of certain transformation techniques in the study of non-linear systems. By M. NARSING RAO, Defence Research and Development Laboratory, Chandrayan Gutta Lines, Hyderabad 5, Andhra Pradesh, India	117

NUMBER 2—AUGUST

	Page
Dynamic analysis of fourth-order feedback control systems. By D. R. TOWILL, Lt. CDR. J. S. COOPER, R.N. and J. D. LAMB, Dynamic Analysis Group, University of Wales, Institute of Science and Technology, Cathays Park, Cardiff.....	121
Generation of linear cyclic binary arrays. By G. C. CHOUDHURI, Department of Telecommunication Engineering, Bengal Engineering College, Howrah, India	147
Assignment of closed-loop eigenvalues by the direct method of Liapunov. By B. PORTER, Department of Mechanical Engineering, University of Salford	153
Eigenvalue sensitivity of modal control systems to loop-gain variations. By B. PORTER, Department of Mechanical Engineering, University of Salford	159
Eigenvalue and eigenvector sensitivities in linear systems theory. By T. R. CROSSLEY and B. PORTER, Department of Mechanical Engineering, University of Salford.....	163
Piecewise-quadratic and piecewise-linear Lyapunov functions for discontinuous systems. By STEIN WEISSENBERGER, Department of Mechanical Engineering, University of Santa Clara, California, U.S.A.	171
Real and complex-exponential describing functions for transient analysis of non-linear control systems. By A. D. CHARALAMPOUS and C. F. CHEN, Electrical Engineering Department, University of Houston, Houston, Texas.....	181
Exact solutions for a generalized class of non-uniform transmission lines. By A. G. J. HOLT and K. U. AHMED, Department of Electrical Engineering, University of Newcastle upon Tyne, England.....	199
An algorithm for the improvement of linear separation. By C. CHITTI BABU and B. L. DEEKSHATULU, Department of Electrical Engineering, Indian Institute of Science, Bangalore 12, India.....	209
Tracking by band-limited inputs. By D. MITRA, Control Systems Centre, U.M.I.S.T., Sackville Street, Manchester 1.....	221
Sensitivity comparisons of various analogue computer simulations. By CHIU-KAI LEE, AED Radio Corporation of America, Princeton, New Jersey, and CHI-TSONG CHEN, Department of Electrical Sciences, State University of New York at Stony Brook, New York.....	227
On the continuous equivalence of non-reciprocal networks. By J. K. SEN and S. K. SAHA, Department of Electronics and Telecommunication Engineering, Bengal Engineering College, Howrah 3, W. Bengal, India.....	235

NUMBER 3—SEPTEMBER

Performance characteristics of multi-variable model-reference adaptive systems synthesized by Liapunov's direct method. By B. PORTER and M. L. TATNALL, Department of Mechanical Engineering, University of Salford....	241
---	-----

	Page
A 7 day integrated circuit electronic clock. By E. J. BRACH and PAUL POIRIER, Engineering Research Service, Research Branch, Canada Department of Agriculture, Ottawa.....	259
Stochastic optimization of feedback control systems for mean-square-error minimization with reference to single-time-constant ideal. By T. RAJAGOPALAN and V. SESHADRI, Indian Institute of Technology, Madras 36.....	263
On the control of stochastic systems. II. By D. D. SWORDER, Department of Electrical Engineering, University of Southern California, Los Angeles, California 90007.....	271
Neuron modelling. By B. D. CHARAN and B. L. DEEKSHATULU, Department of Electrical Engineering, Indian Institute of Science, Bangalore 12, India.....	279
Respiratory control of heart rate. By B. D. CHARAN and B. L. DEEKSHATULU, Department of Electrical Engineering, Indian Institute of Science, Bangalore 12, India	293
Statistical optimal control. By R. H. C. NEWTON, Inter-University Institute of Engineering Control, School of Engineering Science, University College of North Wales	303
High-order eigenproblem sensitivity methods: theory and application to the design of linear dynamical systems. By T. R. CROSSLEY and B. PORTER, Department of Mechanical Engineering, University of Salford.....	315
A note on controllability, observability and sufficient coordinates in linear differential games. By R. K. RAGADE and I. G. SARMA, Department of Electrical Engineering, Indian Institute of Technology, Kanpur, U.P., India.....	331
Solution of discrete regulation problems using linear algebraic equations. By N. J. BERGMAN, Department of Electrical Engineering, University of Waterloo, Ontario, Canada, and J. A. CADZOW, Department of Electrical Engineering, State University of New York at Buffalo, Buffalo, New York.....	337
Optimal linear control with input derivatives. By J. H. ANDERSON, Control Systems Centre, University of Manchester Institute of Science and Technology, Manchester 1	351
Correspondence:	
On "Closed loop optimization of fixed configuration systems" (Eisenberg and Sage 1966). By M. SCHOENBERGER, Esso Production Research Company, P.O. Box 2189, Houston, Texas, U.S.A.....	359

NUMBER 4—OCTOBER

On the verification of Aizerman's conjecture for a class of systems. By A. K. MAHALANABIS, Department of Electrical Engineering, Indian Institute of Technology, New Delhi 29, India, and H. BHAUMIK, Department of Electrical Engineering, University of Roorkee, Roorkee, U.P., India.....	361
--	-----

	Page
Neutral functional differential equations and extensions of Lyapunov's method. By D. RAMA KRISHNA RAO, Government Polytechnic, Mahbunagar, (A.P.), India	369
An extension to the method of Kryloff and Bogoliuboff. By P. G. D. BARKHAM and A. C. SOUDACK, Electrical Engineering Department, University of British Columbia, Vancouver, Canada.....	377
Studies on some aspects of the problem of three-level NAND network synthesis. By A. K. CHOUDHURY and K. K. CHAKRABARTI, Institute of Radio Physics and Electronics, University of Calcutta.....	393
The geometric aspects of a class of differential games. I. Necessary conditions. By MARSHALL C. Y. KUO, Department of Electrical Engineering, Newark College of Engineering, Newark, New Jersey.....	413
The geometric aspects of a class of differential games. II. Sufficient conditions. By MARSHALL C. Y. KUO, Department of Electrical Engineering, Newark College of Engineering, Newark, New Jersey.....	433
The effect of the amortisseur windings on control. By E. D. EYMAN and M. G. MUDALIAR, Department of Electrical Engineering, The University of Iowa, Iowa City, Iowa	443
In-the-large stability of relay and saturating control systems with linear controllers. By A. T. FULLER, Engineering Department, Cambridge University	457

NUMBER 5—NOVEMBER

Performance bounds for discrete-time stochastic optimal control problems. By YOSHIKAZU SAWARAGI and TSUNEO YOSHIKAWA, Faculty of Engineering, Kyoto University, Kyoto, Japan.....	481
Reduced order Kalman filter. By K. W. SIMON and A. R. STUBBERUD, Department of Engineering, University of California at Los Angeles.....	501
Mappings of linear vector spaces induced by a transformation matrix and its applications. By R. SABOUNI, Control Systems Centre, University of Manchester Institute of Science and Technology, Sackville Street, Manchester 1	511
Solid state piezo-resonant crystal motor operating on electrostatic principle. By F. L. N-NAGY and J. H. CALDERWOOD, Electrical Engineering Department, University of Salford, Salford 5, Lancashire.....	529
The computation of finite stability regions by means of open Liapunov surfaces. By J. L. WILLEMS, University of Gent, Belgium.....	537
Application of mathematical programming in the design of optimal control systems. By DANIEL TABAK, Wolf Research and Development Corporation, Riverdale, Maryland 20840, and BENJAMIN C. KUO, Department of Electrical Engineering, University of Illinois, Urbana, Illinois 61801.....	545

	Page
Estimation of inaccessible state variables for processes with <i>a priori</i> unknown parameters. By D. GRAUPE, Department of Mechanical Engineering, Technion, Israel Institute of Technology, Technion City, Haifa, Israel, and B. H. SWANICK, Department of Electrical Engineering and Electronics, University of Liverpool, Liverpool 3, England.....	553
Realization of Boolean functions with a large number of unspecified states by a single threshold logic element. By D. SARMA, D. BASU, S. GHOSH and A. K. CHOUDHURY, Institute of Radio Physics and Electronics, University of Calcutta	559
Graphical analysis of a class of non-linear feedback control systems with step input. By J. CHANDRASEKHAR and H. B. KEKRE, Department of Electrical Engineering, Indian Institute of Technology, Bombay 76, India.....	573
Infinitesimal transformations for non-linear time varying systems. By S. A. MUSA and S. SRIVASTAVA, The Moore School of Electrical Engineering, University of Pennsylvania, Philadelphia, Pennsylvania.....	583
On the bounds of the trajectories of differential systems. By ANTHONY N. MICHEL, Electrical Engineering Department, Iowa State University.....	593

NUMBER 6—DECEMBER

Optimization of a non-linear distributed parameter system using periodic boundary control. By MAGNE FJELD and TORE KRISTIANSEN, Division of Automatic Control, The Technical University of Norway, Trondheim, Norway	601
The root-loci of four pole systems. By S. E. WILLIAMSON and W. F. LOVERING, University of Surrey, Guildford, Surrey, England.....	625
Computation of sub-optimal linear controls for non-linear stochastic systems. By H. W. SMITH and F. T. MAN, Department of Electrical Engineering, University of Toronto, Canada	645
Additional results on sub-optimal feedback control of non-linear systems. By W. L. GARRARD, Department of Aeronautics and Engineering Mechanics, University of Minnesota, Minneapolis, Minnesota.....	657
Insensitivity of control systems. By S. BARNETT, Department of Mathematics, Loughborough University of Technology, Loughborough, Leicestershire	665
A comparison of several methods for calculating the general functional matrix for linear systems. By S. BARNETT, B. FORD and C. STOREY, Department of Mathematics, Loughborough University of Technology, Loughborough, Leicestershire	677
Comparison of numerical methods in stability analysis. By J. R. HEWIT and C. STOREY, Department of Mathematics, Loughborough University of Technology, Loughborough, Leicestershire	687
On the determination of limit cycles in relay control systems with additional saturation type non-linear elements. By PETER MOLL and MADHUKAR PANDIT, Institute of Control Systems, University of Karlsruhe, West Germany.....	703

	Page
The Davidon method of solution of the algebraic matrix Riccati equation. By F. T. MAN, Department of Electrical Engineering, University of Toronto, Canada	713
Subject index	721
Author index	723
